	EK 1000 Extractor Kit 1000	LOCATION
		ARCH/ENG
		REP. NAME

General description: **EK1000** enables two simultaneous users to capture and filter the noxious fumes and gases that normally occur when soldering, gluing and working with solvents.

The air is filtered through a particle and gas filter. The filter is disposable and filter change is made dust free.

The speed of the fan is variably controlled by a speed controlled, placed on the workbench.

The user can also adjust the airflow by using the damper included in each arm.

Correct airflow can easily be set to suit different applications.

The extraction hood supplied with the kit improves the capture ability for heavy and light gases. There are two optional hoods shown under accessories.
