	EK 2500 Extractor Kit 2500	PROJECT
		LOCATION
		ARCH/ENG
		REP. NAME

General description: The EK 2500 is a flexible system for the capture of noxious fumes and gases that normally occur when soldering, gluing, and working with solvents.

The two arms are made of an anodized aluminum and have three adjustable joints.

The arms are easy to adjust to get close to the source.

Correct airflow can easily be set with the help of the speed controller to suit different applications.

The arms can be used independently from each other, due to the variable speed of the fan and the damper in each arm.
